Re: Company Profile

We would like to introduce ourselves to you.

GW & BR Cramer Pty. Ltd. has been operating as a company since June 16th, 1988.

Geoffrey Cramer has had, more than 35 years experience in road construction and maintenance

For the past 20 years, repairs and new construction of roads and work yards at the timber and pulp mill, Carter Holt Harvey have been undertaken to Management's satisfaction. The works entail: hot mix patching of damaged areas, full depth construction of yards and log bays and connecting roads on site, preparation of roads for bitumen sealing, whether primer-seal or two coat seal. The Management has also been very supportive in our company's undertaking for Quality Assurance

G.W. & B.R. Cramer Pty Ltd have tendered successfully on Alpine, Indigo Shires and various contractors, primer-seal and resealing contracts for both local and main roads using **The Shell Company of Australia Ltd** products. Particular interest has been shown in the Multi-grade and Polymer Modified Binder.

With a view to upgrading a Matthew's Brothers manufactured Bitumen spraying unit mounted on a Mercedes Benz prime mover was purchased

Details of the vehicle follow:

Engine speed control equipment -

Eliminating speed and the reliance on manually operated Road Speed control. With Cabin Mounted Control panel which includes the following:-

Engine Speed Control equipment, maintaining pre-set Road speed automatically.

Engine speed to within 2rpm. Irrespective of whether ascending or descending gradients.

Enables the repeatability of Application Rates to be guaranteed 99% accurate over the full Distance sprayed for each and every Spray Run. Push button return to conventional road speed control at the completion of spray run.

Digital Display of Road Speed Metres/Min. Travelling speed.

Digital Display of Distance Sprayed, recording meter, activated by Spray ON-OFF controls with Reset or Accumulating Sprayed Distance. Includes measuring facility when the Spraybar is isolated.

Bitumen Pump Speed control switching -

For Pre-set Engine and Pump Speeds for Tank Circulation.

For pre-set Engine and Pump Speeds for hand Lance Spraying.

For pre-set Engine and Pump Speeds for Spray in bar Circulate when only 2 or 3 Spraybar jets are operating.

Spray widths of up to 8 metres are available.

AUTOMATIC SPREADER-BOX

Originally calibrated by Vic Roads on 27/12/96 it now holds a current calibration certificate for 2003-2005.

We would like to bring to your attention that the following equipment is available for hire.

The 3 new bitumen kettles

3x **Kenworth** - T600

1x **Kenworth** - W925

And a **Freightliner** FLC112

New T600 not pictured.

Volvo Loaders L90 and L70

Champion & Mitsubishi **Graders**, **Schwarze Suction Sweeper**, various **Rollers** – multi-wheel and steel drum, self-propelled and towed, **profiler/scattrak**, **roadbrooms** & low loader **trailers**. We are also capable of transporting machinery or goods to work sites.

Scattrack with Forklift Attachment.

All vehicles are for hire with operator.

Now automatic towed broom – Sweepster.

Most Staff members have certificates in Traffic Control and Worksite Traffic Management and are able to assist any organization that requires those services.

Most importantly, GW & BR Cramer Pty. Ltd. has in place Quality Assurance, and is fully committed to providing the highest levels of quality service. VicRoads registration was sort and approved - QM 4515 1199/S. Safety is of prime importance, and over the years an exceptional safety record has been maintained.

Continuously upgrading existing machinery has enabled the Company to provide excellent service, quality product and diversity with the focus on safety and environmental issues.

New bitumen storage facilities were required, hence three 25000 litre stainless steel electric kettles –were ordered from **Matthew Brothers Engineering P/L**, and these safely facilitate heating and storage.

We gratefully acknowledge the support given by **The Shell Company of Australia Ltd**, the excellent service and advice received from competent qualified staff. The assistance given by **‘Workcover’** representatives is also appreciated.

Since family members have joined the Company, focus has been more on the specialized bitumen field.

Purchase of the near new ‘Schwarze 4500 Suction Sweeper’ has greatly assisted our bituminous sealing contracts. According to VicRoads specifications a suction sweeper is required for removal of excess aggregate. The Schwarze is designed not only for this procedure, but has an extensive range of features and options.

Rather than having a large sweeper brush to dislodge the debris from the road surface, regenerative air sweepers utilize a finely directed high-pressure airflow to dislodge the debris and guide it towards a vacuum stream. It is able to assume the shape or profile of any road surface, this ‘knife edge’ high pressure airflow is particularly useful on rough or uneven surfaces (even in areas with pot-holes), and is extremely efficient when it comes to the removal of fines and particles from cracks in the road surface.

Alpine Shire Council has used the Schwarze Sweeper for removing ‘Leaf loss’ on Council gardens/lawns, curb and channeling. The size and weight of this suction sweeper is ideal for cleaning grassed park areas and driving under low tree branches.

With new automatic spreader boxes, a tow-behind-mechanical drive road sweeper broom, and a new ‘Shoulder Spreader’ machine that is attached to a front end loader (Refer attached Video for example of operation) G.W. & B.R. Crameri P/L anticipate being able to provide a wide range of equipment and expertise to clients.

Directors:

Geoffrey Crameri
